- White metal ring with the number "69" present on both sides of the band
- Two yellow plastic barrettes

NamUs #: UP53306
Agency Case #: 85-07156

On 10/24/1985, the nearly skeletal remains of an unidentified white female were discovered in a field next to Mowry Avenue in Newark, CA (Alameda county), located approximately two miles from I-880. The victim had been shot and is estimated to have died approximately two months to one year prior. Forensic anthropologists determined the victim was approximately 5'6" to 5'8" with brown/red/auburn shoulder-length hair and between the ages of 25 and 36. Her bottom two front teeth were missing and are believed to have been missing for some time (possibly since childhood) as the other teeth had grown together to close the gap. She was recovered wearing multiple items of jewelry (*no pictures available*).
